Discover Digifort Difference

Reference Site & Company Profile Volume 3

We Move Forward

Without change there is no innovation, creativity, or incentive for improvement. Those who initiate change will have a better opportunity to manage the change that is inevitable.

The best innovation start with a purpose a focus on why it's needed and who will benefit from it.

At Digifort, our focus is on delivering innovation that helps our customers work smarter, do more, and have freedom of choice.

Do you want to

- ✓ ***Improve operational performance***
- ✓ ***Save money***
- ✓ ***Remain free of the restrictive and proprietary system***

Then join the thousands who said "yes" to Digifort's open platform VMS solution.

Our Mission

Since 2009, Digifort has been at the forefront of digital video surveillance revolution with our market-leading VMS, delivering a truly open platform and cutting-edge technologies through integrated solutions.

Whatever the future holds, apart from our own pioneering continual develoments, Digifort's vision is to collaborate with many other technology manufacturers from physical security, building, automation management, machine, and deep learning software to enable our users or operators to quickly respond any major incidence and understand incident situational picture from all connected devices.

Digifort Today

Today's Digifort's award-winning VMS - a truly open platform, is offering unrivalled integrated solutions combined with highest-quality performance, compatibility with a low total cost of ownership.

Peel through the noise of extravagant/ intensive publicity and all those clever marketing strategies and Discover Digifort Difference. Our success has been by word of mouth.

We are undisputed as:

- *The easiest to use and learn thanks to our smart, intuitive GUI from juts right-click of your mouse.*
- *The most stable thanks to our solid and performance driven philosophy.*
- *The most responsive and less CPU and RAM intensive.*
- *The most efficient VMS as it is extremely light on IT infrastructure thanks to the dynamic stream management from any network cameras.*
- *The fastest and most powerful failover and failback in the world, and we are the only VMS that can failover and failback Video Analytics, Number Plate Recognition as well as I/O boards thanks to our smart integration.*

Word Of Mouth

As the name implies, word-of-mouth testimony is any instance where consumers share information about a product or organization with one another, and benefit from the experience of others. They come from people like you and cannot be bought.

The references contained in this booklet are about people behind the scenes, the customers, who are happy to share the satisfaction of the products delivered and the stable performance they are experiencing as promised.

If you want to generate valuable word-of-mouth, it is as simple as ensuring your product and services meet the highest standards leading to satisfaction, trust and commitment.

TRANSFARMACO (TRF)

Buenos Aires, Argentina

Since 1972, Transfármaco provides first-class comprehensive logistics solutions. Its work is the safe and efficient distribution of the products that each client trusts.

Transfármaco was looking for a better control of stock, supervision of shipments or reception of superior merchandise or simply to improve specific situations within the work processes that generated losses for the company.

Vivotek in Argentina & Brazil, met with the certified Lematron Integrator and its wholesale importer Selnet SA and conducted an analysis of the context. They decided to replace the analogue technology already installed in the 3 plants, by Vivotek IP infrastructure.

The installation of the Digifort software was a key complement when simplifying the monitoring tasks. It allowed to save time and automate work previously done by security professionals. It also facilitated the control of sensors and lighting, combined with IP cameras, as well as the surveillance of opening and closing of doors, gates and exhibition curtains.

BANDEIRANTE ENERGIA (EDP)

São Paulo, Brazil

EDP is a leading company in the energy sector that operates in the generation, distribution, transmission, commercialization and electric power solutions segments in the country. Headquartered in the city of São Paulo and with assets in 12 Brazilian states.

To standardize the security system, to unify the models of all the operational units, to increase the speed of the operation and to guarantee greater reliability, EDP developed the Smart Control, Smart Entrances security project in its distribution service centers. In this project Digifort Enterprise Software was used to manage the solution of cameras, alarms, automation, audio, access control and virtual concierge.

The project was designed to guarantee the equity security of the 104 operating units of EDP São Paulo and also to reduce security costs - each of the 104 buildings needed at least three security guards to complete the 24-hour monitoring cycle, which required hiring more than 320 professionals to carry out the security of the whole complex, making the operation expense very high.

Energy company EDP has been able to reduce its security costs by 95% by changing its manual and physical security system by an electronic system that monitors, controls and alerts everything that happens in its infrastructures in real time.

I/O Modules integrate with alarm system

MAGAZINE LUIZA

São Paulo, Brazil

WALMART BRAZIL

Brazil

It consists of an event detection monitoring system using alarm panels and warning the Operational Control Center, where the Digifort solution is centralized and receives these events in an integrated way to the alarm software.

At its headquarters, Walmart has a server with approximately 6,000 registered cameras. These cameras are distributed in their retail units with analog technology connected to DVRs, recording and being monitored locally.

In addition to the cameras, the stores have alarm panels with the most varied types of sensors. Whenever a trigger of any device (motion sensor, electric fence, panic button, etc.) connected to a local alarm panel is triggered, that panel itself sends the sector data to the alarm monitoring software that recognizes and activates the Digifort that starts recording and live monitoring of the cameras attached to the sector. This way it is possible to have centralized only 1 server and without compromising the band, because the connections are on demand.

Integration of Access, Fire and Building Automation.

ARTERIS is one of the largest companies in the highway concessions sector in Brazil, with more than 3,400 kilometers managed. Through its concessionaires, the company runs highways in five states and is responsible for the operation of five federal and four state concessionaires. Such a large and complex scenario requires a well-developed safety design to ensure everyone's safety.

To make the project viable, the use of Digifort, intelligent monitoring software was necessary. Whenever a unusual situation happens, the central monitoring is alerted by a screen pop-up. This way the operator can take immediate action, such as using the camera to zoom in on the scene, opening the audio and checking, for example, why a door is open for a long time, so that the company has made toll enforcement more efficient with modern monitoring system, automation and process innovation. More than 200 "smart" cameras guard the cabins 24 hours a day on the highway.
